Modira 2027 Hyperlinked Digital Planner

Everything about this file — tap a line to jump there:

1 • What's inside

2 • How to use it

3 • The verified-link guarantee

4 • Compatibility & honest limits

5 • License & provenance

1 · What's inside

1,000 hyperlinked pages

One tap takes you anywhere. Every page carries a tab rail and is at most three taps from the Index.

- 12 monthly spreads, 4 quarter hubs, 53 weekly spreads and 365 daily pages
- A Tracker Library of 60 named trackers in 5 categories, each behind a tapable index
- 495 linked notes pages in 10 styles, tucked behind every month, week and day
- 3 swappable cover designs at the front — keep your favourite, delete the rest

2 · How to use it

1. Download on a computer or browser. The Etsy app cannot download files — use a real browser, then move the PDF to your tablet.
 2. Open or import the planner into your app. Any PDF reader works; PDF-annotation apps like GoodNotes and Notability keep the links live and let you write on the pages.
 3. Tap to navigate. Tap a month, a day, a tab, or the Index — the planner jumps there. Tap the tab rail on the right edge of every page to reach the Index or Year from anywhere.
-

Navigation model: the Index is the hub. Index -> month -> week -> day is three taps; the tab rail and back-buttons return you in one. Tap targets are sized for a finger, and no two overlap.

3 · The verified-link guarantee

Machine-verified

Every one of 4,758 internal links in this planner was machine-verified against the calendar before release. Our software walks the finished PDF, resolves every link to its expected page, and confirms all 1,000 pages are reachable — so a wrong weekday or a dead tab never ships.

Method: a pypdf walk of the shipped file matches every link annotation 1:1 against the calendar-derived page graph — zero dangling, zero mistargeted, zero off-page. Verified 2026-07-17.

4 • Compatibility & honest limits

WHAT THIS IS: a standard hyperlinked PDF. It opens in any app that reads PDFs, and the built-in links jump you between pages with a tap.

WORKS WITH: GoodNotes, Notability, and other PDF-annotation apps that keep PDF links live; plus any standard PDF reader on a computer, tablet, or phone.

PLEASE READ BEFORE BUYING:

- This is a PDF, not a native planner app: no handwriting-to-text, no typed-text search, and no calendar sync.
- Links are activated by a TAP. Some apps open PDFs in a read/link mode that is separate from their pen/ink mode.
- We have NOT yet certified this planner on specific e-ink hardware (reMarkable, Kindle Scribe, Boox). We make no device-specific promise until that test is on record — and when we run it, the update is free.
- Not for printing (it is screen-designed), not for OneNote, and not for apps that flatten PDF links.

5 · License & provenance

LICENSE: Personal use. This planner is for your own personal planning. Please do not resell, share, or redistribute the files, or claim the design as your own. One purchase is for one person.

PROVENANCE: Every page is deterministically computer-typeset by our own software and machine-verified before release. No generative AI art is used anywhere in this planner — there is nothing to disclose. Typefaces: Poppins and EB Garamond, both under the SIL Open Font License 1.1.

Thank you for supporting a small, independent shop. If anything is unclear, message the shop through Etsy and we'll help.
